

BIOTEC-NSTDA, Keen join hands for oil bioremediation

06 June 2013 | News | By BioSpectrum Bureau

Singapore: Thailand's National Center for Genetic Engineering and Biotechnology (BIOTEC) and National Science and Technology Development Agency (NSTDA) have collaborated with Keen, which was previously known as Hi-Grimm Environmental and Research, to develop a small-scale mobile microbial reactor for on-site bioremediation.

This reactor will allow on-site production of microorganism used in the treatment of oil-contaminated wastewater. It will eliminate the cost of packaging and transportation of bioremediation agents, making it suitable for industrial sites that need to regularly manage oil-contaminated wastewater in high volume.

In this project, the research team aims to develop a 100 liter reactor equipped with automatic aerator as well as a suitable culture medium to produce oil-degrading microorganisms used for treating high-oil-content wastewater. Collaboration with an industrial partner such as Keen will facilitate the field test of this unit. The project is expected to take 18 months to complete, from May 2013-to-October 2014.

This project is a result of the previous BIOTEC-Keen collaboration to screen for local oil-degrading bacteria and develop into a commercial bioremediation product. Keen successfully launched bioremediation products in 2010, with products and services for various industries such as petrochemical industry, automobile industry, food industry, hotels and hospitals.
