Zuellig Pharma opens state-of-the-art clinical trial support innovation centre in South Korea

December 1, 2025 | News

New facility is set to be South Korea's most advanced automated hub for clinical logistics and sourcing

Zuellig Pharma, a leading healthcare solutions company in Asia, has announced the grand opening of its new state-of-the-art Clinical Trial Support (CTS) Innovation Centre in South Korea.

Strategically located near the Gyeongbu Expressway in Gyeonggi-do province, the new 3,800-square-meter facility is set to redefine standards in clinical trial logistics through automation, digitalisation, and stringent Good Practice (GxP) compliance. It is designed to enhance operational efficiency, scalability, and reliability across diverse therapeutic areas.

The facility is equipped with advanced capabilities that set new standards for clinical trial logistics. It features a fully automated order fulfillment system that enhances the speed, accuracy, and reliability of clinical supply delivery. Its flexible and scalable architecture ensures uninterrupted operations, while robust cybersecurity measures safeguard sensitive clinical trial data.

In addition, the facility provides comprehensive temperature-zone support, enabling Zuellig Pharma to manage thousands of unique clinical trial SKUs under strict ambient, cold, frozen, deep frozen, cryogenic and return storage conditions. This ensures that temperature-sensitive products are handled with the highest level of precision throughout the entire supply chain.
