

## LindaCare raises 7 M Euro for improving disease management

24 January 2018 | News

**The investment will be used to help LindaCare accelerate its US market expansion and product commercialization.**

A digital health company specializing in remote patient monitoring solutions for chronic disease management, LindaCare recently announced a seven million Euro Series B investment, featuring participation by Philips, together with PMV as new investors. Existing investors Capricorn ICT Arkiv, Connecticut Innovations and a number of other minority shareholders also participated in this round.

The investment will be used to help LindaCare accelerate its US market expansion and product commercialization. It will also support the building of new services around the existing software platform and explore options for expanding its products to a broader range of cardiac diseases.

LindaCare's first product, OnePulse, has been successfully installed and is in use in a number of major hospitals in Europe, as well as being launched in its first pilot projects in the US. This product enables cardiologists to significantly improve the efficiency of remote monitoring of patients suffering from chronic heart failure and cardiac arrhythmia with Cardiac Implanted Electronic Devices (CIED).

LindaCare will also provide remote patient monitoring services through its Independent Diagnostic and Testing Facility (IDTF) service organization, and other local service providers, thereby allowing overloaded medical professionals to focus on diagnosis and care of patients, and outsource the remote patient data gathering and analysis.
