

Foxconn to promote health management in Taiwan

16 March 2018 | News

H2U provides free measurement of blood pressure, body temperature, heart rates and body weight.

Foxconn Electronics and Uni-President Group have come together to promote personal health management by installing H2U Health ATM, a smart physical checkup facility, at 7-Eleven stores in Taiwan.

H2U, whose hardware and software are developed by Foxconn, provides free measurement of blood pressure, body temperature, heart rates and body weight. Users can store the data on their smartphones or download apps to store them on the cloud.

So far H2U machines have been installed at 100 outlets of the convenience store chain, which is under the Uni-President Group.

There are about 5,200 7-Eleven stores around Taiwan, and more stores are expected to install the H2U machines.
