

QBRI to promote research on neuro-developmental disorders

April 23, 2018 | News

The agreement will pave the way for the two partners to undertake joint research activities.

Qatar Biomedical Research Institute (QBRI), part of Hamad Bin Khalifa University (HBKU), has signed a Memorandum of Understanding (MoU) with the Shafallah Center, a non-profit centre dedicated to children with special needs. The agreement will pave the way for the two partners to undertake joint research activities, foster direct contact between specialists, as well as facilitate the use of facilities and equipment for research purposes.

The two partners will work together on research projects related to neurodevelopmental disorders. QBRI and the Shafallah Center are united in their aspirations to improve the quality of healthcare services in Qatar via the prevention, diagnosis, and treatment of disease and illness.

Through this agreement, the two parties agree to encourage direct contact and cooperation between their staff and researchers. Additionally, QBRI and the Shafallah Center will share knowledge and expertise, as well as participate in the development of collaborative biomedical research projects with mutual consent.
