Medical AI startup Synyi raises $15.7 M

03 May 2018 | News

Synyi will use the fund to develop medical natural language processing, medical data governance and machine learning.

Venture capital firm GGV Capital has led a RMB100 million ($15.7 million) series B round in Shanghai-based artificial intelligence-powered medical data solutions provider Synyi. Existing investors including Sequoia Capital China and Zhen Fund also participated in the round.

Synyi will use the fund to develop medical natural language processing, medical data governance and machine learning. While establishing its team and expanding business, Synyi will also explore deeper in the industry standards.

Synyi focuses on processing medical data to serve smart medical systems. It uses natural language processing technology to structure and standardize medical related texts, including lexical analysis, syntactic analysis, semantic analysis, structured expression, and standardized mapping.

The firm was founded in 2016 by Zhang Shaodian, who completed his PhD in biomedical informatics from Columbia University.
