

Providence's spinal system receives 510(k) approval from FDA

22 May 2018 | News

This 510(k) clearance provides a more specific indication for the DTRAX Spinal System, which was a Class I medical device more broadly indicated for access and preparation of a spinal joint to aid in fusion.

Singapore- Providence Medical Technology, a manufacturer of innovative instruments and implants for cervical fusion surgery, announced it has received 510(k) clearance from the United States Food and Drug Administration (FDA) for its DTRAX Spinal System ("DTRAX") to be specifically indicated for use in posterior cervical fusion in patients with cervical degenerative disc disease. This 510(k) clearance provides a more specific indication for the DTRAX Spinal System, which was a Class I medical device more broadly indicated for access and preparation of a spinal joint to aid in fusion.

"With the FDA 510(k) clearance of DTRAX Spinal System, Providence now has the only sterile-packaged, single-use set of instruments specifically cleared for posterior cervical fusion," said Providence CEO Jeff Smith. "Our unique, single-use instruments assist surgeons in performing the steps of a traditional posterior cervical fusion. We believe DTRAX represents a landmark innovation for cervical fusion benefiting patients, surgeons, facilities, and payers."
