

Health Canada gives clearance to WAT Medical's innovative devices

03 July 2018 | News

Anti-nausea wristband and Anti-migraine head patch gets Health Canada Clearance

Shortly after WAT Medical's leading product to treat nausea-induced vomiting, EmeTerm, received its FDA clearance earlier in April, it has now also received official clearance from Health Canada.

Health Canada ensures all of its certified medical products are of the highest quality and are able to provide the best care for patients to improve their lives.

WAT Medical has reached the long-awaited milestone and is thrilled to introduce its innovative technology to Canada.

The product is effective for a wide range of treatments, including all types of motion sickness induced by travelling and morning sickness.

EmeTerm allows its users to be free from medication side effects like dizziness, drowsiness and thickened lung secretions.

EmeTerm's technology is called neuro modulation, which is Health Canada cleared and clinically proven. The electric current is sent by the peripheral nervous system via P6 acupuncture point on the underside of the wrist.

The electric pulses are delivered to their targets in the brain and precisely block the emesis signals from brain to stomach.

EmeTerm is currently used by consumers in over 20 countries worldwide, including all of Europe, the United States and Australia.

EmeTerm is the winner of 2017 iF Design Award for its innovative design and usability. The patented electrodes design enhances the transfer of electric pulses from device to skin. No conduct gel is needed, which increases convenience and affordability to consumers.

WAT Medical's anti-migraine device, HeadTerm, also received Health Canada clearance, and is going to enter the Canadian market along with EmeTerm.

HeadTerm also uses neuromodulation by sending precise electric impulse to targeted area in the brain responsible for endorphin release.

HeadTerm reduces migraine pain within minutes after it occurs, and also works as an effective preventative measure by reducing the frequency and intensity of migraine episodes.

Unlike any anti-migraine technology before it, HeadTerm is a disposable device at an affordable price. Its small and lightweight design allows it to be extremely portable, offering consumers fast and convenient migraine treatment.
