Tabula Rasa HealthCare's SinfoníaRx releases RxCompanion 10.0 Software

24 July 2018 | News

In addition to SinfoníaRx's comprehensive full-service model, RxCompanion 10.0 also is offered as a stand-alone and hybrid software solution supported by SinfoníaRx's expert clinical support.

Tabula Rasa HealthCare, Inc., a healthcare technology company optimizing medication safety has announced a new generation of proprietary software, RxCompanion 10.0, developed by the Company's subsidiary, SinfoníaRx. The new version enhances TRHC's medication management solutions used by health plans, health systems, provider organizations, and pharmacies.

RxCompanion, first introduced in 2008, advances the delivery of clinical services, helping to minimize program costs while maximizing program outcomes. The 10.0 installment introduces a number of targeted enhancements focused on optimizing the user experience as demonstrated in the software's robust quality-control measures and intuitive automation capabilities. Through a re-imagined system interface, RxCompanion 10.0 provides users with all-new safeguard provisions and refined documentation enhancements, including immediate clinical feedback and automatic population of conditional fields.

"For more than ten years, RxCompanion has been an industry-leading software solution, utilizing hundreds of clinical algorithms to identify, predict and prevent medication-related problems," said Dirk Timmermann, SinfoníaRx's Vice President of Information Technology. "The RxCompanion 10.0 enhancement builds on this depth of powerful analytic capabilities, presenting our users with a unique platform for patient engagement and real-time results."

In addition to SinfoníaRx's comprehensive full-service model, RxCompanion 10.0 also is offered as a stand-alone and hybrid software solution supported by SinfoníaRx's expert clinical support.
