Neuron Biohub envisions setting global standards in life sciences

August 13, 2018 | News

Supporting healthcare and improving life has been a key driving passion of the company.

Neuron Biohub Sdn Bhd has set up Malaysia's first state-of-the-art integrated Life Sciences Logistics & Testing Biohub in Glenmarie, Shah Alam, to support the healthcare and life science industries.

Neuron Biohub Sdn Bhd is specialized in providing its logistics & testing services in a cGMP / GDP / GDPmd certified hub that ensures the fidelity of sensitive products and raw materials all the way from testing and production to last mile delivery in Malaysia. Supporting healthcare and improving life has been a key driving passion of the company.

A major challenge faced by the healthcare industry has been the availability of a systematically developed hub with controlled environments and well executed processes that provides vital support throughout.

Neuron Biohub Sdn Bhd aims to bridge this critical gap with its biohub that occupies 88,600sf of land at the Hicom-Glenmarie Industrial Park in Shah Alam, Selangor. 75,000sf of that includes cold and freezer rooms capable of regulating temperatures between 8 degrees Celsius to -25 degrees Celsius.

In addition, the biohub houses R & D and test laboratories capable of providing testing and support ranging from heavy industrial products testing to scientific research in a cleanroom environment. Operational activities and environmental conditions within the hub as well as delivery are managed and monitored by a state-of-the-art command centre that also provides remote access.
