

Roche to create industry-ready graduates

30 August 2018 | News

Through this partnership, the University will recruit biology and chemistry students to join the Roche Academy.

Roche Diagnostics and the University of Indianapolis are partnering to create a custom talent pipeline for biomedical equipment technicians through the newly created Roche Academy. The partnership was co-developed with Ascend Indiana, a Central Indiana Corporate Partnership (CICP) initiative.

As Roche's customer base continues to grow, the demand for quality and properly trained biomedical equipment technicians continues to increase. These technicians are critical to Roche's operations, as they maintain critical lab equipment and provide customer service across Roche's 32 geographic service regions.

Through this partnership, the University will recruit biology and chemistry students to join the Roche Academy, where they will complete a Roche-customized curriculum path and summer internship experience focused on the hands-on, life science and engineering skills necessary for employment at Roche. In exchange, Academy students successfully completing the program will receive financial and educational incentives, including a job offer from Roche upon graduation.
