

Aptar Pharma brings new respiratory drug delivery device

07 October 2018 | News

The drug delivery device will aid in decreasing irritations caused due to coughs, colds, allergies, respiratory problems and dry nose or throat conditions.

Drug delivery systems provider Aptar Pharma has introduced a new portable, drug delivery device called PureHale to help relieve the symptoms of upper respiratory system disorders.

The new ready-to-use solution can be used to deliver natural ingredient formulations such as saline.

Using the company's Bag-on-Valve technology, PureHale is designed to generate a continuous fine mist of 20-30µm that will cleanse, moisturise and soothe the upper respiratory tract.

The drug delivery device will aid in decreasing irritations caused due to coughs, colds, allergies, respiratory problems and dry nose or throat conditions.

PureHale is light and available with different mask and mouthpiece options for adaptable treatment.
