

TPlus signs MoU with Yonsei University for dose management

16 October 2018 | News

TPLUS has built up a therapeutic imaging gadget called 'DoseTracker.'

Health services IT organization, TPLUS has inked a Memorandum of Understanding (MoU) with South Korea based Yonsei University Health System to research together on the blockchain-based Medical Radiation Dose Management System.

TPLUS has built up a therapeutic imaging gadget called 'DoseTracker.' For the first time in Korea, this kind of device has been developed that oversees the dosage of medical radiation and gives user-centric services to medical workers while lessens the uneasiness of patients about radiation exposure.

Various major hospitals in Korea such as Yonsei University Medical Center, Chaum, and Gyeongsang National University Changwon Hospital, National Health Insurance Service Ilsan Hospital, etc. have already implemented the DoseTracker.

TPLUS will check the viability of Artificial Intelligence-based Organ Dose program which was created by Harvard Medical School and Massachusetts General Hospital at Yonsei University Medical Centre and will coordinate in the advancement of the platform.
