

## EDBI-backed Moderna Therapeutics files for \$500M IPO

15 November 2018 | News

**If successful, it would be the largest-ever initial public offering for a biotech company. The company raised \$500 million in a Series G round in February.**

**Singapore** - US biotech giant Moderna Therapeutics – which is backed by Singapore-based EDBI and Sequoia Capital China – has filed with the SEC to raise up to \$500 million in an initial public offering. Moderna would trade on the NASDAQ under the ticker symbol MRNA.

If successful, it would be the largest-ever initial public offering for a biotech company. The company raised \$500 million in a Series G round in February.

The filing comes nine months after the company closed a \$500 million Series G round of private equity financing that gave the company a \$7 billion valuation. As of Sept. 30, the company raised \$1.8 billion in equity and \$800 million through partnerships with companies like AstraZeneca, Merck & Co., Vertex, Alexion and others, according to the filing.

Moderna's areas of therapeutic focus are infectious diseases, immuno-oncology and rare diseases. Product candidates – currently in Phase I clinical testing – include mRNA-1647, a prophylactic vaccine against cytomegalovirus; mRNA-4157, a personalized cancer vaccine for solid tumors; and mRNA-2416, an intratumoral immuno-oncology therapeutic for solid tumors and lymphoma.

This year, a number of biotech companies have decided to list their shares on the public market. In May, Singapore-headquartered biotechnology company Aslan Pharmaceuticals has raised \$42 million in a US IPO, while more recently Chinese biotech firm Innovent Biologics reportedly raised \$421 million in Hong Kong's largest biotech IPO this year. Meanwhile, California-based biotechnology company Equillum, backed by Indian drugmaker Biocon, is reportedly planning to raise up to \$86 million through an initial public offering.
