

OPTIMA, METALL+PLASTIC to show new technology at Pharma Congress

22 January 2019 | News

In addition to showcasing state-of-the-art technologies, Pharma Congress also offers an excellent opportunity to make valuable industry contacts and form networks

Pharma Congress Production & Technology will be held in Düsseldorf from April 9 to 10, 2019, and experts from Optima Pharma and Metall+Plastic will be returning once again. This time, the focus is on biodecontamination processes. As part of a live demonstration, they will show how decontamination times can be reduced even further with the new technology known as DECOpulse®.

“DECOpulse® is the ideal solution for fast and safe decontamination and also saves H_2O_2 , says Thomas Bertsche, Managing Director of Metall+Plastic in Radolfzell (Germany). With DECOpulse®, the company is presenting a new, innovative system at Pharma Congress, which halves the duration of the overall decontamination cycle and, by using less H_2O_2 , reduces the exposure of materials, active ingredients, and products to H_2O_2 .

Atomization of H_2O_2 enables precise dosing

The new process is based on the atomization of H_2O_2 , which produces a particularly fine spray mist. The amount of H_2O_2 introduced can thus be dosed with particular precision. The patented process will be presented as part of a live demonstration at Pharma Congress. The technology will also be presented with an isolator exhibit. In addition to showcasing

state-of-the-art technologies, Pharma Congress also offers an excellent opportunity to make valuable industry contacts and form networks.
