Ping An Good Doctor develops new offline service scenario

January 29, 2019 | News

As an integral part of Ping An Good Doctor's healthcare ecosystem, "One-minute Clinics" incorporate "AI Doctor" technology and the Company's over 1000 in-house medical team.

China's leading one-stop healthcare ecosystem platform Ping An Health Medical Technology Company Limited has announced that it has stationed a "One-minute Clinic" at the Nanjing Siqiao Expressway Service Area to provide fast and convenient one-stop healthcare services to drivers and passengers. This is another new offline service scenario developed by Ping An Good Doctor following the launch of "One-minute Clinics" across enterprises, large communities and chain pharmacies.

As an integral part of Ping An Good Doctor's healthcare ecosystem, "One-minute Clinics" incorporate "AI Doctor" technology and the Company's over 1000 in-house medical team and nearly 5000 renowned external contracted doctors to provide users with self-serve medical and healthcare services including medical advice, rehabilitation guidance, drug taking advice and to-be-paid for drugs, etc.

Every one-minute clinic has more than 100 categories of common drugs, all of which are cryogenically refrigerated to ensure their quality. If a user needs a drug that isn't stored at the booth, they can purchase it online through our App and enjoy the one-hour drug delivery services provided by nearby cooperative pharmacies.
