Atigra

Company: Karma Medical Products

Weight: 117kg

Dimension: 126*66*118

The winner of 2010 PACE Zenith Awards and the 2008 Better Technology Awards, ATIGRA provides new mid-wheel design that incorporates the active terrain response (ATR) suspension system. ATR can traverse V-shaped rough terrain ground, which traditional mid-wheel drive chairs cannot cope with. The highly adjustable seating system incorporates five adjustable functions that help dealers to keep minimum stock and allow therapists to adjust the ATIGRA easily to meet their client's needs.

The compact power base accepts a wide range of seating systems and is available with a number of different electronic options. ATIGRA has been designed with the end user in mind, so that it is beneficial to dealers and therapists.
