

T-FIT® insulation presents leading product T-FIT Clean at P-MEC 2019

28 May 2019 | News

T-FIT®, a Zotefoams plc business, will be showcasing the exceptional performance benefits from the pharmaceutical cleanroom piping insulation of choice, T-FIT Clean, at this year's P-MEC exhibition, co-located with CPhI China (18 – 20 June 2019) in Shanghai.

T-FIT® CLEAN
Unique Insulation Technology

T-FIT is a unique, modular technical pipework insulation system purposely designed for highly controlled production environments. Visitors to P-MEC China will have the opportunity to discover the impressive properties of T-FIT Clean, widely acknowledged as the leading pipework insulation system for pharmaceutical cleanrooms worldwide.

Manufactured from ZOTEK® F42HTLS fine, closed cell PVDF foam via Zotefoams' unique three-stage process, T-FIT Clean offers unrivalled in-use performance benefits and is the only foam insulation product that meets or exceeds all relevant global standards for cleanroom insulation, including FM4910 Cleanroom Materials Protocol and ASTM G21-96 and G21-15 Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi. It is also fully compliant with cGMP.

Originally developed to meet rigorous aviation industry standards, ZOTEK F42HTLS is easy to clean and immune to most chemicals. It has a wide operating temperature range, excellent flammability credentials and is inherently pure and non-toxic. Its closed cell structure eliminates swarf and particles and it is easily vacuum- or thermoformed into complex shapes, enabling the development of clamshell elbows, tees and runs for all standard pipework. Quick to install and with a long, maintenance-free service life once in place, T-FIT Clean offers low Total Cost of Ownership.

As the Chinese Pharma market enters a phase of strong growth, T-FIT recognises the need for innovative technology that meets stringent industry standards to ensure significant impact in the overall production and consumption of pharmaceutical equipment in the future.

This year T-FIT's East Asia Commercial Manager, Paul Marty, will outline the unrivalled performance benefits of T-FIT Clean in a technical product showcase on Wednesday 19th June at 15:00hrs, in P-MEC zone N2M41.

Zotefoams Director of HPP Products, James Bridges, says, "As China begins to explore more advanced, innovative technology within the pharmaceutical industry, CPhI & P-MEC offers T-FIT a great platform to showcase its unique product offering through detailed technical displays and valuable customer engagement, as we continue to demonstrate our commitment to this very important market."
