

NEB opens eighth subsidiary in Australia

05 July 2019 | News

Extend its global subsidiary network

New England Biolabs (NEB®), a world leader in the production of reagents for the life science industry, extended its global subsidiary network with the opening of New England Biolabs Australia Pty Ltd.

Australia's Life Sciences industry is home to more than 230,000 life science researchers, working towards advancing discoveries across the academic, agricultural, clinical and biotech industries. Australian researchers have been instrumental in many scientific breakthroughs that have had significant global impact on both clinical outcomes as well as our fundamental understanding of biology.

"The Melbourne based office will provide the scientific research community in both Australia and New Zealand with more efficient access to the latest NEB products and technical support in the local time zone, as well as OEM partnership opportunities," says Andrew Boslem, General Manager for the Australia office. "NEB Australia are looking forward to working with our customers to accelerate the next ground-breaking discovery, making a difference in our local communities and showcasing our Australian research talent to the world."

NEB also maintains subsidiary offices in Canada, China, France, Germany, Japan, Singapore and the United Kingdom.
