

Boehringer Ingelheim opens Health Management Centre in China

16 August 2019 | News

The new Health Management Centre integrates animal disease and health diagnostics as well as monitoring tools

Boehringer Ingelheim, world leading animal health company, announces the opening of the Boehringer Ingelheim Health Management Centre (HMC), again boosting Boehringer Ingelheim's investment in China. The HMC records the first of its kind established by a multinational animal health company in China.

Designed for world leading veterinary reference laboratories, the centre integrates animal disease and health diagnostics as well as monitoring tools to maintain and enhance animal health.

Located in Shanghai's Zhangjiang Hi-Tech Park, the HMC has an investment of nearly 3 million euros in its first phase. It is a full service reference laboratory with all diagnostic disciplines to provide comprehensive diagnosis for animal diseases, with a total projected staff of 25.

The veterinary reference laboratory of the HMC, containing a serology lab, a molecular biology lab and a bacteriology lab, is currently capable of detecting more than 10 animal pathogens. It comprises state-of-the-art design, functionality, safety, and is eco-responsible. Numerous high-tech components allow for rapid detection with maximum quality control.

In addition, the centre aims to build Boehringer Ingelheim customers' own diagnostic capabilities and capacity, functioning both as a reference laboratory and training centre which will provide comprehensive training in laboratory management, quality control, diagnostic platforms and more. The HMC is China National Accreditation Service for Conformity Assessment (CNAS) accredited.
