

DarioHealth announces alliance with DigitalHealth.London

16 August 2019 | News

DarioHealth's innovative digital therapeutics solutions will assist the UK National Health Service with managing chronic health conditions, such as diabetes and hypertension

DarioHealth Corp, global digital therapeutics company has announced an alliance with DigitalHealth.London ("DH.L") as part of its UK Israel Dangoor Health Initiative (the "Initiative"), which aims to partner leading Israeli digital health companies with the UK National Health Service (NHS) to benefit patients.

Dario was selected by DH.L to help bring its digital therapeutics technology to assist NHS patients in better managing their chronic health conditions, such as pre-diabetes, diabetes and hypertension, among other chronic conditions.

The Initiative is a partnership between the UK Israel Tech Hub, which aims to help British companies partner with cutting-edge technology companies in Israel; DigitalHealth.London, a collaborative that helps high-potential, digital health start-up companies connect with the NHS; and Dangoor Education.

DH.L is well placed to accelerate the adoption and scaling of digital innovations across the NHS. The Initiative will help facilitate additional access for DarioHealth to key UK clinicians, academic institutes, healthcare system experts and industries in order to better understand the needs of patients and the NHS.

Dror Bacher, Chief Operating Officer at DarioHealth Corp said, "With 25 per cent of middle-aged adults suffering from hypertension and 2.6 million people diagnosed with diabetes, the NHS needs the very best in digital innovation in order to manage chronic disease conditions successfully, now and into the future. I recently had the pleasure of meeting key NHS clinicians and influencers and learned first-hand about the challenges and opportunities that they're experiencing within the healthcare sector. DarioHealth is well positioned to offer quality digital therapeutic interventions for managing chronic conditions and looks forward to exploring opportunities for integration and partnership with both primary and secondary care providers. Through our collaboration, we will examine the best ways to develop new Dario digital therapeutic solutions for people with chronic conditions within the framework of the NHS."

A key differentiator of Dario's performance-based platform is its emphasis on behavioral engagement with users, through the offering of personalised interventions, which is a unique approach in the digital therapeutics' arena. DarioHealth's platform focuses on the user's needs, experience and satisfaction. We believe that this approach disrupts the traditional approach used by most healthcare companies and makes the Dario platform the most popular product by people managing diabetes and pre-diabetes.

DarioHealth continues to find new, innovative ways to assist its users in improving their health through ongoing analysis of clinical-data studies and the application of new digital solutions. By delivering personalized, evidence-based interventions driven by precision data analytics, high-quality software and personalised coaching, DarioHealth has a dynamic health management approach that empowers individuals to make informed, data-driven choices that improve their short and long-term health. Dario's membership programs offer professional coaching to individuals with pre-diabetes, diabetes and hypertension to provide them a clear and timely view of their condition in a user-friendly format directly on their iPhone or Android mobile device.

DarioHealth's most recently introduced digital product, the Dario Blood Pressure Monitoring System™, assists hypertension patients in managing their blood pressure throughout the day, further solidifying the company's presence in the hypertension management market.
