Malaysia to host Biotechnology 2019 summit

August 21, 2019 | News

Malaysia is emphasizing on recent areas of more optimized research techniques in Biotech and Genetic technologies

Biotechnology 2019, Malaysia Summit is a premier conference which considers all aspects of the multidisciplinary field. The scope of the conference includes biotechnology principles and applications in industry, agriculture, medicine, environmental concerns and regulatory issues.

The conference is to be held during November 23 & 24, 2019 in Kuala Lumpur, Malaysia.

The conference will accept papers ranging from genetic or molecular biological positions to those covering biochemical, chemical or bioprocess engineering aspects as well as computer application of new software concepts, provided that in each case the material is directly relevant to biotechnological systems.

The following topics will be covered in the conference such as Nucleic Acids, Molecular Biology Physiology, Biochemistry, Biochemical Engineering, Bioprocess Engineering, CRISPR, CRISPR-CAS9 Technologies, Industrial Processes, New Products Medical Biotechnology Agro and Food Biotechnology, Genomics and Bioinformatics.

The conference is being organised by Larix international, a Singapore based independent, nonprofit organization dedicated to promoting research and educational opportunities at the interface of medical, life sciences and Engineering.
