Beaumont Health enters agreement with GE Healthcare and Mobile Heartbeat

GE Healthcare, along with Mobile Heartbeat, a leading provider of mobile health care enterprise solutions that improve clinical workflow and care team communication, has announced a signed enterprise agreement with Beaumont Health, Michigan's largest health care system with eight hospitals, 145 outpatient sites, nearly 5,000 physicians, and 38,000 employees.

The clinical communication platform, known as MH-CURE®, has been installed in phases, beginning with one of Beaumont Health's largest hospitals, located in Dearborn, Michigan.

In June 2019, Beaumont proceeded with the rollout of MH-CURE at its Farmington Hills, MI, hospital.

Following the success of these major rollouts, Beaumont signed an Enterprise Agreement with GE Healthcare to continue adding Mobile Heartbeat users across its other six hospitals. Once the enterprise-wide rollout is complete in December 2020, Beaumont Health will have more than 30,000 users registered with MH-CURE.

So far, the first two rollouts GE Healthcare has led with Mobile Heartbeat have featured integrations with multiple, third-party systems, which must work seamlessly together.
