

## Lilly to acquire Dermira for \$1.1B

13 January 2020 | News

## The acquisition will expand Lilly's immunology pipeline

Eli Lilly and Company and Dermira, Inc. have announced a definitive agreement for Lilly to acquire Dermira for \$18.75 per share, or approximately \$1.1 billion, in an all-cash transaction. Dermira is a biopharmaceutical company dedicated to developing new therapies for chronic skin conditions.

The acquisition will expand Lilly's immunology pipeline with the addition of lebrikizumab, a novel, investigational, monoclonal antibody designed to bind IL-13 with high affinity that is being evaluated in a Phase 3 clinical development program for the treatment of moderate-to-severe atopic dermatitis in adolescent and adult patients, ages 12 years and older.

Lebrikizumab was granted Fast Track designation from the U.S. Food and Drug Administration (FDA) in December 2019. The acquisition of Dermira will also expand Lilly's portfolio of marketed dermatology medicines with the addition of QBREXZA<sup>®</sup> (glycopyrronium) cloth, a medicated cloth approved by the FDA for the topical treatment of primary axillary hyperhidrosis (uncontrolled excessive underarm sweating).

Under the terms of the agreement, Lilly will commence a tender offer to acquire all outstanding shares of Dermira, Inc. for a purchase price of \$18.75 per share in cash, or approximately \$1.1 billion.

The transaction is not subject to any financing condition and is expected to close by the end of the first quarter of 2020, subject to customary closing conditions, including receipt of required regulatory approvals and the tender of a majority of the outstanding shares of Dermira's common stock. Following the successful closing of the tender offer, Lilly will acquire any shares of Dermira that are not tendered into the tender offer through a second-step merger at the tender offer price.
