Malaysian firm creates app for security concerns during pandemic

April 8, 2020 | News

Equipped with innovative technology, Linkdood Communication Platform ensures seamless access and cybersecurity whilst working remotely

As small to large enterprises alike execute social distancing measures in response to the COVID-19 pandemic, a resulting spike in remote working is joined with a plethora of data security concerns.

To combat these and keep employees safe, Malaysia based Linkdood Communication Platform (LCP) has come up with a timely solution - a secure and customizable remote office platform with core servers solely controlled by users themselves.

Linkdood Communication Platform (LCP) is the first home-grown Malaysian remote office platform to offer dual security guarantees with private cloud technology to assist and help employees succeed remotely, particularly during this tough situation.

"One fundamental issue is how to equip all employees to work from home as if they were at the office? Technology has the answer. Our proprietary software creates a safe, confidential personal environment for each employee to ensure productivity," said Richard, COO of Linkdood.
