

ROQU Group launches world-first health passport digital platform

31 August 2020 | News

The platform will enable businesses and individuals to quickly minimise risks related to COVID-19 and ensure they can continue daily activities

The Irish-based ROQU Group has announced the pilot launch of Health Passport, a world-first digital platform designed to facilitate increased COVID-19 testing for businesses and the public.

Engineered in Ireland, the platform combines the latest digital technologies with highly accurate and validated COVID-19 testing solutions, delivering results in as little as 15 minutes. The platform will enable businesses and individuals to quickly minimise risks related to COVID-19 and ensure they can continue daily activities.

Health Passport is launching with a trial involving a select range of national participants representing a diverse range of industry sectors: healthcare (hospital, nursing home), logistics, agriculture, education, childcare, entertainment, and others.

The platform has been developed to help national economies by enabling businesses to remain open through continuous proactive testing of employees, identifying positive results at the earliest stage whilst simultaneously protecting communities by offering increased testing.

Health Passport has been developed specifically to work in harmony with all official COVID-19 tests, including laboratory swab and blood tests, and the very latest rapid testing solutions soon to be launched.
