Thanyapura, StemCells21 to offer premium stem cell treatments in Thailand

November 16, 2020 | News

The partnership will offer premium stem cell treatments for various degenerative diseases, immune disorders, injuries and anti-ageing.

Thanyapura Sports and Health Resort, Phuket has partnered with StemCells21 (SC21), a medical biotech company based in Bangkok, Thailand. With over a decade of clinical history and 100 years of collective team experience, SC21 combines 21stcentury cellular medicine and cutting-edge supportive therapies to offer the highest quality stem cell treatments with Mesenchymal Stem Cells (MSCs) and Induced Pluripotent Stem Cells (iPSCs).

A first of its kind for Phuket, Thanyapura in partnership with SC21, will offer premium stem cell treatments for various degenerative diseases, immune disorders, injuries and anti-ageing. The treatments can also tackle a host of medical problems such as type 2 diabetes, osteoarthritis, chronic back pain and inflammatory lung diseases such as asthma and bronchitis, as well as strengthen body immunity and improve fertility.

In the sporting world, regenerative medicine is seen as a crucial component and can aid in optimising the human body to perform at a higher level, as well as being highly effective in the treatment of sports injuries through faster healing, reduced injury inflammation and the regeneration of injured tissue. The human-based regenerative therapy has been successful with high calibre athletes for endurance enhancement and lengthening professional careers by reducing injury rates.

Guests can book a free dedicated one-on-one consultation with a certified stem cell specialist for their first session. Those seeking longer-term treatments can book a discounted stay at Thanyapura to utilise its world-class facilities, award-winning vegan and vegetarian restaurants and lifestyle clinic. Team is excited to facilitate their first clinic outside of Bangkok.

President & CEO of Thanyapura World, Philipp Graf von Hardenberg said, "Treatment packages can be customised from the number of Premium Grade (P1) MSCs to the treatment duration and include supportive therapies from a comprehensive health check-up to the highest standards of after-care services. Thanyapura's 360 approach will help in delivering better, longer-lasting outcomes for challenging conditions that conventional therapies often fail to address, such as stopping disease progression, as well as avoiding surgical intervention.
