

Pelican BioThermal expands network by partnering with Korean Air Cargo

21 December 2020 | News

Will assist with the pharmaceutical sectors ongoing rapid response to the global pandemic

Pelican BioThermal, the global name in temperature controlled packaging, announces its new partnership with Korean Air Cargo, the latest in the company's expanding network of worldwide alliances.

The significant new partnership will see the Asia airline utilise Pelican BioThermal's Cr?do™ on Demand rental programme offering its high-performing shipper solutions direct to the airline's customers for the first time.

The announced agreement gives the partner airline's customers rapid access to Pelican BioThermal's newly expanded range of temperature controlled packaging to cover both deep frozen and frozen applications, which include dry ice and PCM coolants, covering parcel and bulk sizes for single or multi use/reusable including rental through the Cr?do™ on Demand programme.

The Korean Air Cargo collaboration is the latest key development in Pelican BioThermal's global transportation of temperature-sensitive pharmaceutical payloads and will assist with the pharmaceutical sectors ongoing rapid response to the global pandemic.

Dominic Hyde, Vice President, Cr?do™ on Demand, Pelican BioThermal, said: "We are delighted to announce this significant partnership with Korean Air Cargo. Together we will continue to provide safe shipper solutions to meet the rising requirements of the life science and pharmaceutical sector."

With a global network spanning 121 cities in 43 countries, Korean Air Cargo specialises in pharma temperature controlled transportation with excellent infrastructure in all gateways including 14 temperature-controlled storage in ICN, which acquired IATA CEIV Pharma certification.

The latest partnership is part of Pelican BioThermal's ever expanding global network of industry alliances and locations established to meet customers' rising requirements worldwide.
