Opens First RAP e2 Station in Taipei

Envirotainer, the global market leader and by far the largest provider of secure cold chain solutions for air transport of pharmaceuticals, has announced that they are expanding their network of RAP e2 stations by adding Taipei (TPE) to its growing list of network stations.

Taipei (TPE) is the 42nd station in the Envirotainer network to carry the flagship RAP e2, an extremely cost efficient and high-performing solution compared to other active and passive alternatives which provides a strong capacity increase to support the rapidly growing APAC pharmaceutical market, especially in light of the ongoing COVID-19 vaccine distribution.

"We are expanding Envirotainer's capabilities to support the ongoing COVID-19 vaccine(s) shipments across our network," explains Suat Toh, Head of Sales APAC at Envirotainer. "We expect that our investment in the Taipei station will spearhead a fast and secure delivery of COVID-19 vaccines which quickly will hit unprecedented shipment volumes and will be absolutely time- and life critical to people all over the world," she continues.

Recognizing the need for secure temperature-controlled air freight solutions, Envirotainer has been expanding its sales offering in Asia-Pacific over the past years, investing in both service capabilities and an agile network model.
