

Philippine partners JHPIA to support Covid-critical PPE and medical supplies

16 February 2021 | News

Cost-efficient, resilient talent pool and strategic policy reforms provide investment opportunities for japan and neighboring markets

The Philippine government in partnership with the Japan Hygiene Products Industry Association (JHPIA) organized an online briefing with JHPIA members to promote investment opportunities in the Philippines for manufacturers of PPE, hygiene products and medical supplies based in Japan. The webinar showcased the competitive advantage of the Philippines as a manufacturing base for companies not only from Japan but also from neighbouring markets such as Taiwan, South Korea and Malaysia.

With the high global demand for PPE, hygiene products and medical devices amid worldwide shortages caused by the Covid-19 pandemic, the Philippine Government has developed programs to provide financing support and additional fiscal and non-fiscal incentives to assist companies, which include the unhampered movement of goods and personnel and reduced corporate income tax. To date, 42 production lines including textile factories, garment plants and yarn spinning mills have been repurposed to manufacture PPE, and over 1.5 million litres of alcohol, sanitizer and hand spray are now produced monthly in the Philippines.

Lanie Dormiendo, OIC Director of the Philippines' Board of Investments said: "Our large population, rich talent pool and access to key markets open up various opportunities for Japanese manufacturers of PPEs, hygiene and other related products as they explore business expansion or diversification. Our country can serve both as their market and manufacturing base for exports. Throughout this unprecedented global health emergency, the Philippines has proven itself as a manufacturing hub for PPE and other medical supplies vital to fighting the pandemic. We did not impose import or export restrictions and even assisted foreign manufacturers and exporters including Japanese firms at the height of the lockdowns enabling them to continue their factory operations."

Ferdinand Ferrer, Vice Chairman of the Coalition of Philippine Manufacturers of PPE (CPMP) adds: "Heeding the call of the government to repurpose manufacturing to produce medical grade PPE products and fabric, CPMP was established to strengthen the growth of our local PPE manufacturers and sustain our supply chain. We are open to partnerships and

investments from our Japanese counterparts to explore more opportunities and further develop our capabilities."

The Japanese face mask manufacturer Yokoisada is one of several international businesses to successfully set up operations in the Philippines.

Yuki Yokoi, CEO of Yokoisada comments: "The strategic location of the Philippines has been a great advantage for our company because our main markets are in East Asia and ASEAN. There is also available a skilled and English-speaking workforce. During the lockdown, the DTI-BOI has assisted us in the transit of our employees, movement of cargoes, and sourcing of raw materials. Encouraged by the support from the Philippine government, our company recently decided to expand and double our current production capacity with the financial assistance we received from Japan's government subsidy for its supply chain diversification program."

The BOI together with the Philippine Trade and Investment Centers in Tokyo and Osaka will host two other industry-focused webinars for businesses considering expansion or relocation to the Philippines: a multi-sector business-to-business event which will take place on 29 March, followed by a pharmaceutical industry event on 20 May. For further information about the events and other support available from BOI visit: www.philippines.business.
