Hygienelabs India unveils disinfectant treatment for COVID-19, other germs

February 16, 2021 | News

This technology is an alternative therapy that eliminates germs by Ã¢â?¬Ë?lysis' rather than by utilising toxic chemicals

Hygienelabs™ India has secured ground-breaking verification from The Therapeutic Goods Administration (TGA), Australia's regulatory authority, that its new-technology disinfectant treatment can inactivate the COVID-19 virus and other germs on surfaces for up to 24hrs to 28 days per application.

It is the only product in Australia, and possibly worldwide, to have proven and certificated 28-day effectiveness against Coronavirus infection on surfaces.

The treatment has also been approved by delegated laboratories for use in the cabins of Airbus and Boeing airliners. Also, the Hygienelabs™ India disinfectant has been independently evaluated and certificated by Eurofins Environment Testing Australia Pty Ltd, a division of Eurofins Scientific, one of the world's leading bioanalytical testing organisations, with some 800 laboratories in 50 countries.

Hygienelabs India has developed a technology that creates an invisible barrier on the skin and surfaces that inactivates germs, bacteria, fungi and algae upon contact.

This technology is an alternative therapy that eliminates germs by 'lysis' rather than by utilising toxic chemicals. They are widely acknowledged as one of the most advanced non-volatile, surface-bonded antimicrobials, safe for humans, animals, and plants in the world.

Their scientifically proven technology offers a variety of sanitisers which are a class apart:

- Hygienelabs™ India 3-in-1 Skin & Surface wipes are perfect for instant clean-ups and sanitisation on the go. Hygienelabs™ India 3-in-1 Surface Disinfectant Spray is a safe way to kill 99.99 per cent of germs and inhibit mould and mildew growth.
- Hygienelabs™ India Foam Sanitiser uses a water-based, bonded coating that is safe for people, plants, pets, and the environment.
- Hygienelabs™ India Surface & Air Fogger is a 2-in-1 treatment which safely sanitises and protects against 99.99 per cent of germs.

Built with a transmission reduction vision, Hygienelabs™ India specialises in developing and sourcing technologies such as the COVID-19 virus to fight germs faced by the world today.

The prevalence of life-threatening diseases has triggered the need for advanced hygiene and sanitation solutions.
