# Waters collaborates with TetraScience to provide unparalleled insights into chromatography data

February 25, 2021 | News

**New Technology Provides Waters' Empower Chromatography Data System Users with the Ability to Share and Analyze Lab Instrument Data**

Waters Corporation has entered a reseller agreement with TetraScience, a cloud technology innovator powering transformational changes in life sciences R&D. Through the partnership, Waters will now offer its customers the Empower™ Data Science Link, powered by TetraScience. This unique technology pairs Waters' industry-leading, compliance-ready Empower Chromatography Data System (CDS) with TetraScience's Data Platform and data science tools, providing unparalleled insights into chromatography data.

Mike Harrington, Senior Vice President, Global Markets, Waters, said, "Our partnership with TetraScience is built on offering scientific organisations the flexible means to access the instrument data connected through Waters' Empower CDS so they can more easily use it to gain new insights and inform decisions."

Empower Data Science Link, powered by TetraScience is a cloud-native technology providing a solution for customers to unlock their Empower data and enable export into third party data analysis tools via standardised formats such as FAIR and Allotrope.

This technology facilitates the application of advanced analytics across Empower connected instruments. Empower-enabled organisations can leverage data science tools to uncover insights across their 'distributed' Empower data, even data that reside on different instruments located elsewhere in the enterprise.

"In order to unlock the potential of life science R&D labs and dramatically accelerate discovery, we must capitalise on the power of AI and data science. A precondition to enabling these capabilities is moving the industry away from a legacy data model of silos and point-to-point integrations, to a native and unified cloud-based data paradigm," explains Patrick Grady, Chief Executive Officer, TetraScience.

The Empower Data Science Link, powered by TetraScience is now available exclusively from both TetraScience and Waters' worldwide distribution network.
