

Chinese firm Mindray launches novel imaging technologies

31 May 2021 | News

Launches new General Imaging, Women's Healthcare and Cardiology Ultrasound Solutions

Mindray, a global leading developer and provider of medical devices and solutions, has announced the launch of its new General Imaging, Women's Healthcare, and Cardiology ultrasound solutions on May 28, 2021.

Underpinned by the theme "Innovation Defines", each solution is specifically designed to increase the strength of diagnostic evidence available to doctors to ensure better patient care.

"For over 30 years, innovation has been deeply-rooted in Mindray's DNA. With hospital systems growing and expanding, it is imperative for the healthcare industry to continue to go beyond designing individual products to engineering connected healthcare solutions. It is with this holistic view that we can ensure an improved healthcare experience for patients, whilst helping to expand clinical capacity," said He Xujin, General Manager of Mindray Medical Imaging Systems. "The launch of our latest ultrasound solutions marks a milestone for Mindray, as we continue to pioneer new platforms under the guiding principle, 'Innovation Defines'".

China based Mindray's [General Imaging ultrasound solutions](#) are equipped with a number of advanced technologies, including high frame rate contrast-enhanced ultrasound (HiFR CEUS), comprehensive HiFR elastography, and enhanced quantification measurement for a new level of image clarity. These features provide clinicians with extensive tools for more precise diagnosis and treatment — giving them reinforced confidence for improved patient outcomes.
