GPS shoe

Company: Glorious Union Medtech

Dimension: 30x10x10cm

Weight: 1.5kg

Are you worried that your loved one may walk off or drive away and end up somewhere else and not remember how to get back home? The Aetrex Navistar GPS Footwear System is the most ground-breaking product containing GPS tracking technology designed to help protect individuals afflicted with Alzheimer's and other forms of dementia who have a tendency to wander and become lost.

These innovative shoes feature the latest GPS tracking technology embedded in the base of the heel with location coordinates sent to a central monitoring station. When a person is wearing the Aetrex Navistar GPS Footwear System, it is possible to quickly track and locate them using the interactive tracking website service. The service is contingent upon enrollment in a separate monthly tracking plan. The tracking service works within the US and excludes Alaska & Hawaii.
