Indonesia to adopt Paspor Sehat as digital health credentials for travel

July 21, 2021 | News

Partner with Knowledge Catalyst to connect Indonesia's Digital e-HAC system with digital health credentials for seamless traveling

Knowledge Catalyst, a recognized provider of Digital Health Credentials, also known as HealthCerts in Singapore, announced a partnership with Paspor Sehat, a recognized provider of the Electronic Health Alert Card (e-HAC) solution in Indonesia. Knowledge Catalyst will power Paspor Sehat's platform to issue Digital Health Credentials from their network of healthcare institutions.

Effective immediately, Paspor Sehat will start issuing tamper-proof and verifiable COVID-19 test credentials, starting with travels between Indonesia and Singapore. The Credentials will be issued directly to travelers through digital platforms and authorities can easily verify that the COVID-19 test certificates have been issued by accredited healthcare institutions and ascertain the authenticity of the certificates.

Syahmudrian Lubis, CEO of Paspor Sehat, also said, "Paspor Sehat is the partner of the Ministry of Health of the Republic of Indonesia, for COVID-19 test results document validation. We connect to more than 6,700 hospitals, clinics, and laboratories to help travelers obtain their COVID-19 test credentials in the form of a QR code. Travelers can now use them as a mandatory document to fulfill travel requirement screenings at airports and seaports. The Paspor Sehat QR code is automatically transferred to e-HAC mobile apps and the PeduliLindungi application. Through our collaboration with Knowledge Catalyst, we are helping COVID-19 test results of Indonesia's travelers to be recognized in other countries globally. This can only be implemented efficiently with the blockchain technology available today."
