Australia approves Pfizer COVID-19 vaccine for 12 to 15-year-olds

July 26, 2021 | News

The National COVID-19 Vaccines Taskforce has been undertaking detailed planning to support the roll out of the COVID-19 vaccine for children

Australia's COVID-19 vaccination rollout has taken another step forward with the Pfizer vaccine being approved for use in children aged 12 to 15 years.

The Therapeutic Goods Administration (TGA) has thoroughly, and independently, assessed the domestic and international evidence before extending its approval for the Pfizer vaccine to be administered to this age group.

Up until now, the Pfizer vaccine had only been approved for use in Australia for people aged 16 years and over.

As with all vaccination decisions associated with the COVID-19 pandemic, the Australian Technical Advisory Group on Immunisation (ATAGI) will now consider this approval and provide expert advice on which groups of adolescents should be prioritised for the roll out of the vaccine and how and when it should be administered.

ATAGI has been meeting with global experts over recent days to inform their deliberations and expert advice.

The National COVID-19 Vaccines Taskforce has been undertaking detailed planning to support the roll out of the COVID-19 vaccine for children, following an approval from the TGA and in line with the expert medical advice from ATAGI.
