Taiwanese startup iXensor launches integrated COVID-19 screening solution

27 July 2021 | News

PixoHealth Data Management Platform as the Security Solution for the New Normalcy

iXensor, a startup based in Taiwan, has launched the next generation of integrated COVID-19 screening solution, the PixoHealth Pass Admin App and Web Portal.

The PixoHealth Pass Admin App is a virtual gatekeeper, which screens and verifies the COVID-19 related health conditions through a scan of QR code displayed by PixoHealth Pass App users.

In addition, the PixoHealth Pass Admin Web Portal synchronizes multi-source COVID-19 related health data and rapid test results from PixoHealth Pass App users and PixoTest$^{®}$ POCT Analyzer simultaneously.

With PixoHealth Pass apps and in-app consent, the authorized institution can track app users' rapid test results, vaccination status and COVID-19 related symptoms directly on the web portal.

The utilization of PixoHealth Pass Admin Web Portal, PixoTest POCT Analyzer and PixoHealth Pass App fully digitizes the data management processes with a one-time setup. In addition, PixoHealth Pass Admin App allows organizations to configure health-data based access management rules for keeping SARS-CoV-2 from causing cluster infections.

The PixoTest$^{®}$ POCT COVID-19 Antigen Test detects the nucleoproteins of SARS-CoV-2 in the human nasopharynx and anterior nasal cavity.
