

UK's Evergreen Life partners with Cievert to champion patient-led healthcare

13 August 2021 | News

Cievert and Evergreen Life share a range of research interests to revamp routine healthcare practices by the integration of technology and clinical data

Evergreen Life is partnering with Cievert, the latest addition to the Evergreen family. We'll now be strategically working together to better deliver our services and improve clinical pathways and patient outcomes.

Working across primary and secondary care, the partnership with Cievert has enabled the businesses to integrate products and leverage Evergreen Life's expertise in 'people-powered health' across healthcare.

Vaccess – the primary and secondary care vaccination platform

Vaccess is the latest product that has seen the benefits of the partnership with clinical system integration for the primary and secondary care vaccine solution will available.

Vaccess is a bespoke vaccination management system, built to be both patient-facing and clinician-centric. The platform automates vaccine eligibility checks for influenza as well as COVID-19 boosters and allows patients to book, cancel, or reschedule their own vaccination appointment at a time and location that suits them and the clinic staff. The customizable solution maintains patient anonymity and data security.

The Evergreen Life app provides a quick and easy way for people to manage their patient services online. The app also offers Wellness Check functionality to improve various aspects of their wellbeing such as sleep, fitness, diet and happiness.

Cievert is a digital health company specialising in software that improves the efficiency of complex clinical pathways in NHS hospitals across the UK. Cievert has a track record of using technology to help the NHS to improve access to care; managing referrals for cancer and other specialist treatments, managing thousands of vaccination bookings for sites across the UK.
