Hong Kong firms extend disinfection cobots availability to EMEA region

September 13, 2021 | News

SoftBank Robotics's cleaning robot Whiz and Avalon SteriTech's Gambit disinfection unit produce a cobot that can clean and sterilize commercial space

In response to the growing demands of effective cleaning and disinfection practices Whiz Gambit, the 2-in-1 AI-powered cleaning and disinfection robotic solution, jointly launched by Hong Kong's SoftBank Robotics Group (“SBRG”) and Avalon SteriTech (“Avalon”), is now available across EMEA region following its launch in Asia Pacific in March.

Whiz by SoftBank Robotics is a simple to use and reliable self-driving vacuum designed to work alongside commercial cleaning teams, taking over repetitive, heavy-duty vacuuming of large areas of flooring.

Gambit, a bio-decontamination spray system developed by Avalon SteriTech, has been designed specifically to bolt on to Whiz and leverage Whiz’s autonomous operation to disinfect commercial space.

This combination of technologies offers an unprecedented, comprehensive and innovative cleaning solution. Certified by SGS (a leading testing, inspection and certification company) Whiz Gambit ensures that the efficiency and efficacy of cleaning and disinfection can be maximised, with 2-in-1 disinfection and vacuum cleaning technology.
