Asia Pacific MedTech Forum 2021: Health Futures by 2025

September 23, 2021 | News | By Hithaishi C Bhaskar

Asia Pacific's leading MedTech Conference is set to kickstart on 19th & 20th October 2021

The seventh annual medical technological forum held by the Asia Pacific Medical Technology Association (APACMed) is all set to launch in a hybrid format on 19th & 20th October 2021 in Singapore.

The forum is expecting 1,500 virtual and physical delegates from across the healthcare ecosystem, including policymakers and healthcare practitioners, academia, hospital groups, payers, MedTech companies, and technology firms.

Under the theme, Health Futures by 2025, Asia Pacific MedTech Forum 2021 will feature an inspiring speaker line-up of futurists, business leaders, and thought leaders and a Virtual Showcase presenting cutting-edge medical innovations in the hospital and home care settings.

Driven by shifting demographics, rising consumer expectations and technological innovations, the future of healthcare in Asia Pacific is primed for significant transformation. The two-day event will explore five imperatives (“smart bets”) that offer the potential to reshape the healthcare ecosystem for the future: Power to the Patient, New Care Models, Capability Building, Reimbursement Pathways and Innovative Collaborations.

MedTech Forum 2021 provides an exceptional opportunity to meet, engage and learn from futurists and global business leaders who will help enlighten our baseline for realistic scenarios and share the path forward for a healthier future.

As part of a highly interactive and immersive Virtual Showcase, participants will be able to freely explore a 3D, 360-degree environment to learn about innovative MedTech solutions in an operating theatre and healthcare at home setting. Using different personas, it will demonstrate how patients receive the best care whether it is in the hospital or at home.
