BC Platforms expands partnership with Thailand's Bumrungrad International Hospital

Switzerland-based BC Platforms (BCP) has announced an expanded partnership with Bumrungrad International Hospital in Thailand, one of the largest private hospitals in Southeast Asia.

The extended partnership, first formed in February 2019, builds on clinical sample management functionalities and existing automated workflows for genotype-based wellness reporting and NGS-based neonatal screening supported by BCP solutions.

Bumrungrad will now utilize BCP's Personalized Medicine Platform, powered by BC|GENOME, to implement end-to-end clinical NGS workflows for germline and somatic tumour testing, enabling data-driven personalized care for patients.

Additionally, BCP will provide its Discovery and Research Platform, BC|INSIGHT, for curating and analysing clinical and omics data in a secure format to enhance translational research capabilities at Bumrungrad and boost research collaborations.

Bumrungrad will also become a BCP data partner, for which it will contribute valuable, diverse data samples for research.
