China, Switzerland to further strengthen collaboration for science parks

November 12, 2021 | News

Sino-Swiss (Changzhou) Innovation Park is committed to serving as center of innovation for the production of biomedical and medical devices

The China-Switzerland Innovation and Entrepreneurship Cooperation Launch Conference was recently held in Changzhou National Hi-Tech District in a move to further strengthen the strategic partnership on innovation between Switzerland and China and implement the spirit of the Joint Statement on Strengthening Science and Innovation Cooperation signed by China's Ministry of Science and Technology and the Swiss Federal Department of Economic Affairs, Education and Research.

Sino-Swiss (Changzhou) Innovation Park was established in 2018 and sponsored jointly by Torch High Technology Industry Development Center of the Ministry of Science and Technology, the International Economic and Technical Cooperation Center of the Ministry of Industry and Information Technology and the municipal government of Changzhou as a provincial-level international cooperation park.

The park is committed to serving as the industry cluster and center of innovation for the production of intelligent equipment, carbon fiber composite materials as well as biomedical and medical devices.

An Lei, director of the International Department of Torch High Technology Industry Development Center of the Ministry of Science and Technology said, "We look forward to a collaborative effort between China's and Switzerland's science parks that can take a deeper look at an effective model for international cooperation, setting a benchmark and example for future exchanges and collaborations among the world's science parks."
