Mitsui partners with TriNetX to expand global research network in Japan

April 13, 2022 | News

This new partnership agreement accelerates the growth, enabling TriNetX to share its research platform with healthcare organizations in Japan

Mitsui, the global network of healthcare organizations driving real-world research to accelerate the development of new therapies, has signed a partnership agreement to support the expansion of TriNetX's network in Japan.

TriNetX is one of the largest and fastest growing collaborative research technology platforms with healthcare organizations and life sciences companies spanning North and South America, EMEA, and Asia-Pacific. It uses the power of real-world data (RWD) and provides its worldwide community with the ability to improve protocol design, streamline trial operations, refine safety signals, and enrich real-world evidence (RWE) generation. Mitsui will assist Japanese healthcare organizations with joining TriNetX so that these organizations are able to take advantage of up-to-date, global RWD for investigator-initiated and industry-sponsored research opportunities.

Since 2019, Mitsui has been working with TriNetX to strategize on the expansion of its network in Japan. This new partnership agreement accelerates the growth, enabling TriNetX to share its research platform with healthcare organizations in Japan. This will result in increased opportunities for Japanese healthcare organizations to participate in clinical trials and to use data in clinical research, while also improving the efficiency of clinical trial planning and reducing the time required to select facilities for clinical trials.

Mitsui has positioned healthcare and nutrition as a strategic focus area under its 2023 Medium-term Management Plan and is working to create the "Wellness All Mitsui" (WAM) healthcare business cluster. The Partnership Agreement will be a significant step forward in Mitsui's efforts to expand its digital transformation solutions centering on healthcare contact points within the WAM initiatives. Through this initiative, Mitsui will help to enhance the quality of people's lives.
