GenScript Biotech collaborates with Singapore Institute of Technology

May 27, 2022 | News

To deliver positive impact and value within the biotechnology innovation ecosystem

GenScript Biotech and the Singapore Institute of Technology (SIT) have signed a Memorandum of Understanding (MoU) to develop Continuing Education and Training (CET), work-study degree programmes and explore applied research project opportunities. This partnership allows students from SIT to gain global exposure in biotechnology and equip them with industry-relevant skills.

Under the agreement, GenScript will provide internship, full-time employment, industry networking and field service project opportunities for SIT students across several disciplines. As a global biotechnology company, GenScript will leverage its extensive network and deep expertise to provide SIT students with opportunities to gain solid real-world experience.

Through the collaboration, SIT students will gain opportunities to work in GenScript China or Singapore, allowing them to gain a greater understanding of the global biotechnology industry, and develop effective interpersonal skills and behaviours to work in a cross-cultural setting. SIT students will also have opportunities to network and establish professional contacts within the sector, and emerge industry-ready when they graduate.
