

Malaysian Genomics inks MoU with MAHSA Health for education & research

19 August 2022 | News

Looking for collaborations in practice-based education, research and knowledge exchange and R&D

Malaysian Genomics Resource Centre (MGRC) has signed a memorandum of understanding (MoU) with MAHSA Health Sdn Bhd to discuss the formation of a strategic partnership promoting practice-based education, research and knowledge exchange.

Malaysian Genomics is the first company in Malaysia to pioneer genomics and genetic screening in Malaysia for over 17 years. Since then, Malaysian Genomics has expanded its offerings in other important areas in the healthcare and wellness that include cancer immunotherapy, cell manufacturing services and kidney dialysis.

MAHSA Health Sdn Bhd is a Malaysia-grown company, part of MAHSA Group of Companies, which is determined to be a revolutionary leader in healthcare. Since its inception in 2017, MAHSA Health has been striving to be in the forefront of primary healthcare, focusing on family health and wellness.

The MoU is a framework through which MGRC Therapeutics and MAHSA Health can explore opportunities for health and wellness-related services; create opportunities for students' clinical placement, internship and employment; identify opportunities for conducting collaborative research and development (R&D); and create opportunities in training, seminars and conferences.
