

Singapore opens Centre for Microbiome Medicine to improve human health

15 September 2022 | News

One focus area of the Centre is to study how ‘good’ and ‘bad’ bugs in the microbiome can be harnessed to combat the rise in obesity and its associated diseases

Nanyang Technological University, Singapore (NTU Singapore) has launched the Centre for Microbiome Medicine – a research facility that aims to improve human health and find new ways to treat diseases by leveraging the microbiome, which are naturally present microorganisms that play a vital role in our wellbeing.

The research centre at NTU Singapore's LKCMedicine will work with partners including the National Healthcare Group, Imperial College London, and the Singapore-based precision gut microbiome company AMILI to unravel the mechanisms behind microbiome and diseases.

Using human sample collections, advanced DNA sequencing, and laboratory experiments, researchers will look at how microbiome causes a range of diseases like obesity, diabetes, fatty liver, and chronic lung diseases like bronchiectasis. With a deepened understanding of how microbiome is related to these diseases, researchers hope to translate their discoveries into improved diagnostics and new treatments for patients.

The Centre is currently working on understanding the role of the microbes in obesity-related cancers such as colon and other digestive cancers.

In support of microbiome research, the new centre also received a S\$2.5 million gift from Petrina Leong, Sandy Leong, and Jimmy Leong through the Madam Wang Lee Wah Memorial Fund.
