

Sony Electronics launches new generation of 4K HDR 3D/2D surgical displays

21 September 2022 | News

The LMD-XH320MT is now available for sale and the LMD-XH550MT will be available from October 2022 onwards in the Asia Pacific region

Sony Electronics is expanding its line-up of surgical LCD displays with two versatile options, the LMD-XH550MT (55-inch) and LMD-XH320MT (32-inch). The new models can be paired with surgical endoscopes, microscopes, and surgical robots for precise visualization in operating rooms, surgery centers and training and education environments.

The monitors combine detailed 4K resolution, HDR (High Dynamic Range), and Sony's unique Local Dimming Panel Technology, improving visibility through increased control and precise reproduction of highlights and shadows along with support for 3D and 2D images.

Powerful functionality includes improved picture quality to experience more contrast and reduced halation of blood and tissue structures, new interface options, upgraded image enhancement technology and an integration-friendly design.

Medical and Engineering Group is a division company under Sony Electronics (Singapore). It markets Sony's leading medical digital imaging products in Asia Pacific besides Japan. It also provides customised business solutions, comprehensive technical support and after-sales service to help Sony's customers stay at the forefront of their business.
