Murni Teguh Hospital increases access to oncology services in Indonesia with GE Healthcare

October 19, 2022 | News

To support early cancer detection, diagnosis and treatment

Murni Teguh Hospital and GE Healthcare have collaborated with a focus on oncology and nuclear medicine solutions in Indonesia.

This collaboration is in line with the transformation in the field of health technology launched by the Indonesian Ministry of Health (Kemenkes) to provide access to world-class medical services and equipment so that Indonesian people seek treatment domestically.

As a first step, Murni Teguh Hospital and GE Healthcare will present oncology and nuclear medicine solutions centered at Murni Teguh Hospital and in the future, those will be available in all branches in Indonesia. Nuclear medicine services are currently the latest technology for the treatment of oncology.

GE Healthcare will continue to support Murni Teguh Hospital in the development of health services in the fields of nuclear medicine, radiology, angiography, ultrasound, anesthesia, and patient monitoring services.
