

## Chinese medtech startup Macrolux raises CNY100 million in Series A round

20 February 2023 | News

**For providing the world with endoscopic interventional diagnosis and treatment solutions**

Shenzhen Macrolux Medical Technology, a startup based in China, has announced the completion of its Series A round by securing nearly CNY100 million, which is led by Legend Capital. Founded in October 2020 and headquartered in Shenzhen, Macrolux is a medical technology company focusing on innovative solutions for endoscopic interventional diagnosis and treatment.

Macrolux's founding team is formed from experts from leading medical device companies in China and has more than a decade of experience in product development, global marketing and the production management of endoscopes and minimally invasive surgical devices. With a vision of detecting diseases earlier and offering patients better treatments, Macrolux is committed to providing the world with endoscopic interventional diagnosis and treatment solutions covering departments including urology, respiration, and digestion by leveraging its engine for innovation-driven development.

Regarding this fundraising round, ZHANG Weiqiang, General Manager of Macrolux, said: "Disposable electronic endoscopes are an early market experiencing rapid growth. With years of concentrating on the product development and technological innovation of disposable endoscopes, Macrolux has formed strong competitiveness in many aspects and aims to introduce solutions to the world that better meet customer needs relying on our ten more years of technology accumulation in the industry."
