Fapon Biotech launches Chemiluminescence One-Stop Solution Strategy in India

April 27, 2023 | News

To provide a complete range of chemiluminescence products and services

Chinese firm Fapon Biotech Inc. has announced its innovative chemiluminescence one-stop solution strategy at the 28th edition of Medical Fair India, taking place from 27th to 29th April 2023.

Fapon chemiluminescence one-stop solution is designed to provide a complete range of chemiluminescence products and services, consisting of different levels of fully automatic chemiluminescence analysers with open system platforms, reagent development support, as well as high quality core raw material in bulk production. Fapon Biotech aims to help local in-vitro diagnostic (IVD) partners quickly extend their product portfolio and streamline their production processes, as well as accelerate their business in the chemiluminescence immunoassay industry.

During the fair, Fapon Biotech has showcased a series of high performance automatic chemiluminescence analysers: Shine i1000, the smallest fully automatic chemiluminescence immunoassay analyser, and Shine i2000, the compact yet robust and large capacity analyser. Fapon Biotech has developed a rich portfolio of over hundred chemiluminescence immunoassay reagents, including biomarkers for tumor, thyroid, infectious disease, cardiac, inflammation, etc.

Over the past fifteen years, Fapon Biotech has fostered partnerships with many top notch Indian IVD companies. It has contributed to more than half of the IVD raw materials in the Indian market. Leveraging the advantages of IVD raw materials, the company aims to be the preferred partner of chemiluminescence immunoassay product developments for Indian IVD manufacturers.
